

# Plastische Kreise

---

- Vergrössert man einen Kreis plastisch in eine Richtung, in die dritte Dimension,
- so entsteht ein Rad.

Bei weiterer Ausdehnung in diese Richtung sogar eine Walze.

Also eine liegende Säule!

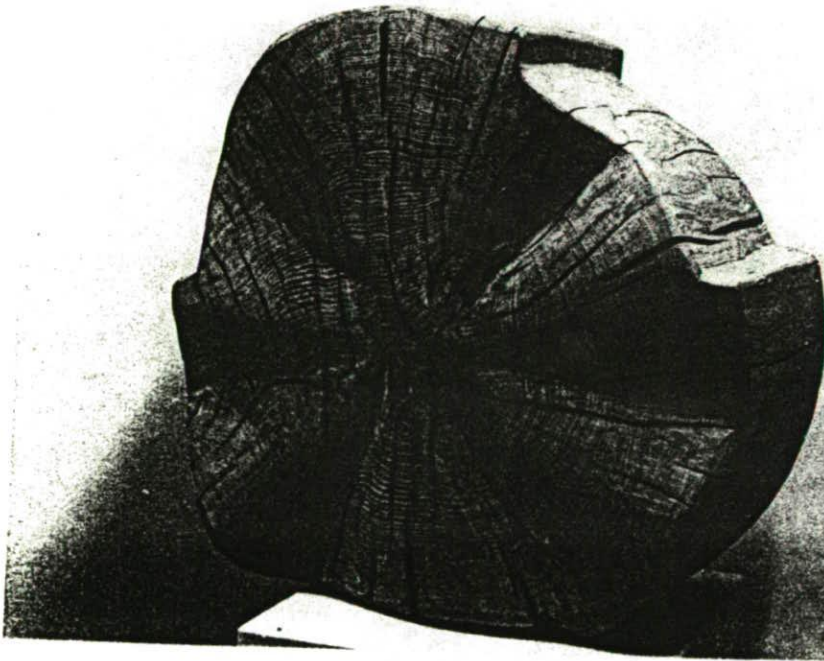

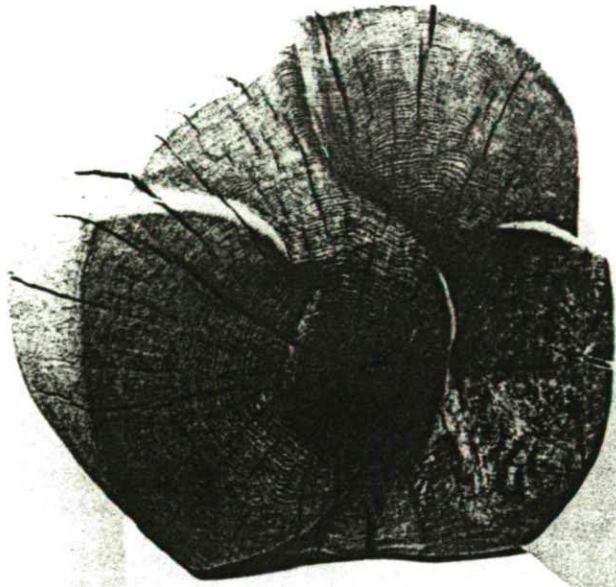

- Von dieser Säule abgeschnittene Scheiben sind Scheiben

Gibt man in diese Scheibe ein Loch: hat man einen Ring!

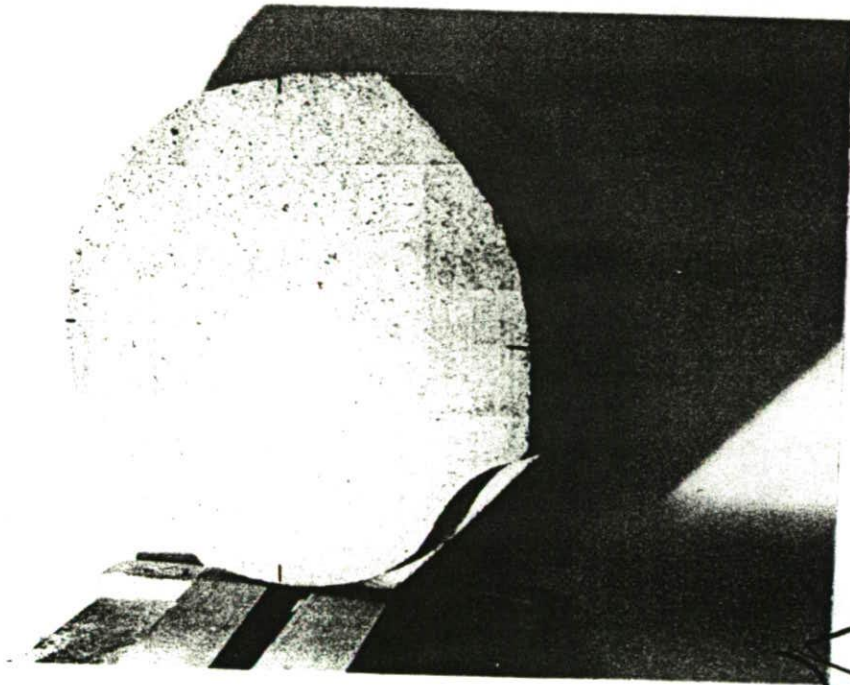

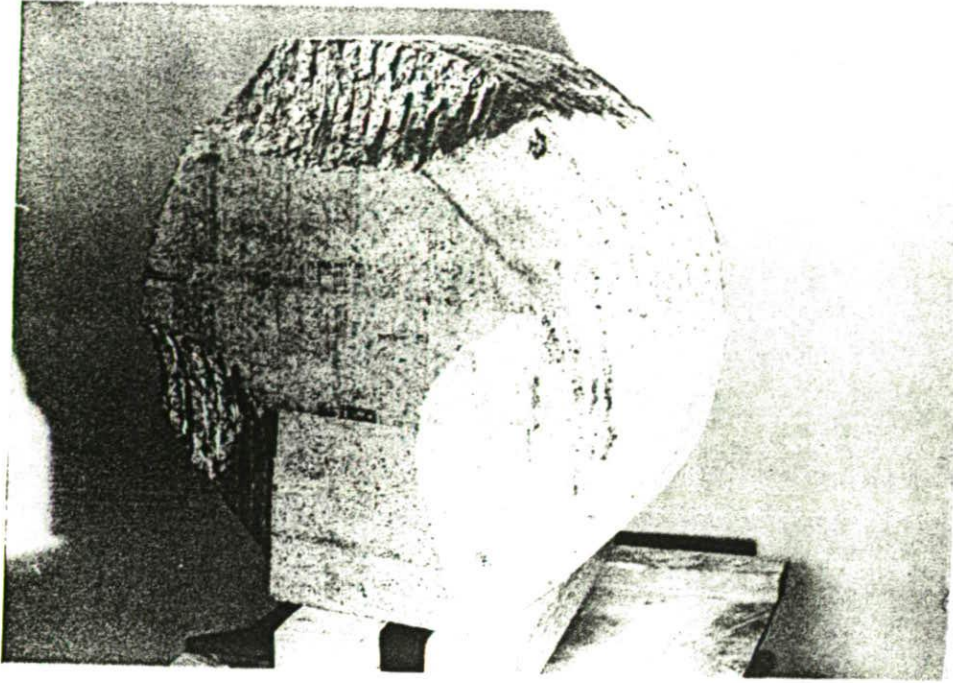

Oder ein Rad ~~ohne~~ <sup>mit</sup> Achsbohrung?

Ein Rad ist also ein plastischer Kreis!

Meine Erkenntnis: Ein Rad ~~ist~~ soll nicht immer eine mechanische Funktion haben.
